Ceiling Solutions

Our ceiling solutions for large public venues provide RF coverage in high traffic areas such as the concession area, the concourse area, private suites and the audience seating area. Solutions include customized ceiling enclosures, antennas, mounts and AP covers.

Under seat Enclosures

Our under seat solutions enable stronger RF coverage for the audience seating area in both indoor and outdoor settings. The enclosures are waterproof—protecting the valuable Wi-Fi equipment inside. They can also be configured based on specific seat heights. We can also further customize enclosures by coloring them or by having company logos etched on the lid.

Handrail Antenna

Our handrail antenna provides two-way RF coverage for any area where handrails are located. The antenna also ships with a patent-pending universal mount system compatible with multiple types of handrails.

Outdoor Solutions

The outdoor solutions allow strong wireless service to be available in outdoor areas such as parking lots, court yards, public gathering areas, parking garages and stadium entrances. Solutions include bollards and remote power solutions such as solar solutions.

Skins

Our vinyl covers or “skins” are an innovative way to hide wi-fi products by blending them into any environment. The skins can be easily removed if necessary.

- They do not effect RF coverage
- The skins can match any environment including rock, brick, foliage and wood
- Outdoor rated
